

Cross-Scenario Threat Modeling Summary Report

Master's Thesis Experimental Evaluation Material | Scenarios 1, 2, and 3

328 TOTAL RAW FINDINGS	28 VALIDATED CANONICAL THREATS	100.0% EVIDENCE GROUNDING RATE	8.5% MEAN THREAT PRECISION
---------------------------	--------------------------------------	--------------------------------------	-------------------------------

Comparative Metrics Breakdown

Evaluation Metric	Scenario 1	Scenario 2	Scenario 3	Cross-Scenario Aggregate
Raw Findings (\$N_{raw}\$)	106	105	117	328 total findings
Validated Threats (\$N_{valid}\$)	12	8	8	28 canonical threats
Duplicates Excluded (\$N_{dup}\$)	94	97	109	300 redundant permutations
Evidence Grounding Rate	100.0%	100.0%	100.0%	100.0% fully grounded
Threat Precision Rate	11.3%	7.6%	6.8%	8.5% mean precision
Reference Coverage	Not calculated	Not calculated	Not calculated	Benchmark pending ground-truth set

Methodological Highlights

Anti-Hallucination & Evidence Grounding: Every validated threat is traceable to an explicitly supplied component, data flow, or trust boundary. No speculative technologies (e.g. WAF, Redis, SIEM) were introduced.
Provenance & Recoverability: Unfiltered raw experimental outputs remain preserved in Layer 1 (scenarioX_raw.*) for full thesis auditing and reproducibility.
